# Assignment 2

## Your E-commerce Site: Static, Responsive Pages

| Detail | Value |
|---|---|
| Student name | Haseeb Alam |
| Roll number / ID | SP24-BCS-142 |
| Course | Web Developmnt |
| Reference site | Sapphire - https://pk.sapphireonline.pk/ |
| CSS framework | Bootstrap 5.3.3 (local copy in css/) |
| Submission folder | assignment-2/ |

## 1. Overview

This assignment delivers the static, responsive front page and product detail page of an online clothing store modeled on Sapphire, a Pakistani fashion brand. The site uses only HTML and CSS (no JavaScript). Bootstrap provides grid, navbar, cards, buttons and form controls, and a short custom stylesheet adds branding (logo, navigation styling, image aspect ratio, footer colours).

## 2. Responsive Screenshots

### 2.1 Homepage (index.html)

The product grid uses Bootstrap row-cols-2 row-cols-md-3 row-cols-lg-4, so the number of cards per row changes with the viewport.

© 2026 Sapphire. Student assignment clone.

*Desktop (1280px): 4 cards per row*

*Tablet (768px): 3 cards per row (top of page shown)*

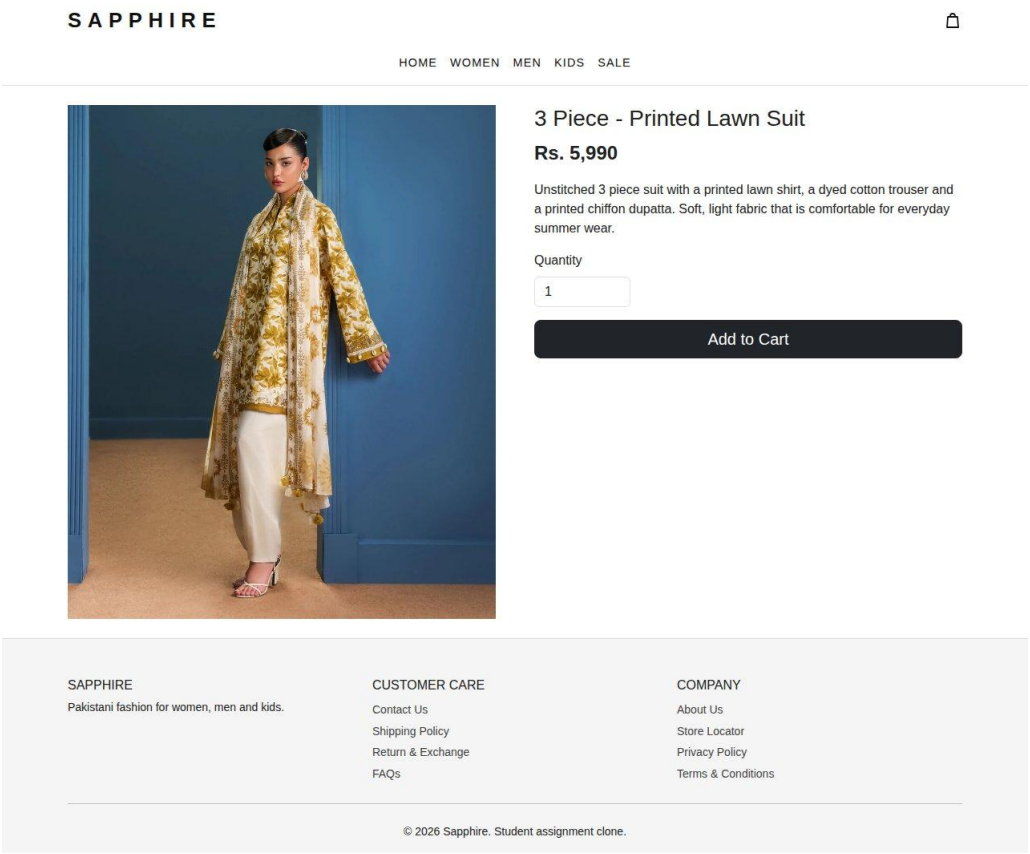

*Phone (375px): 2 cards per row (top of page shown)*

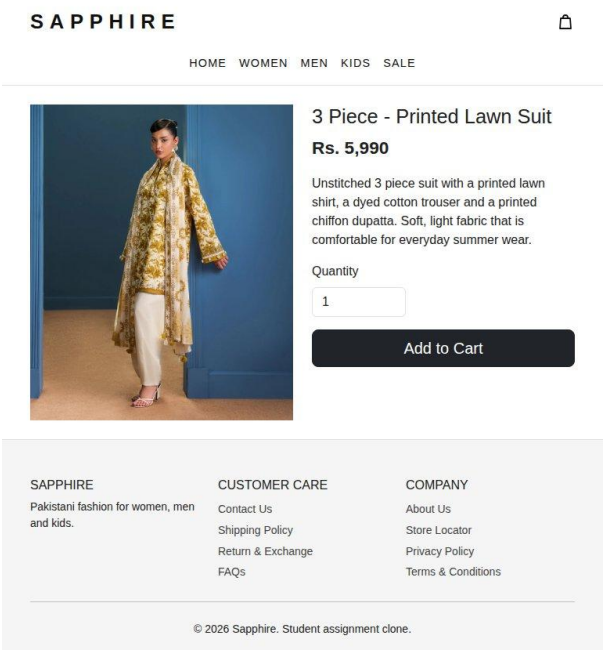

*Full-length screenshots of every page and width are in the screenshots/ folder.*

## 2.2 Product page (product.html)

The image and details sit side by side from the tablet breakpoint upward (col-md-6) and stack on phones (col-12).

*Desktop (1280px): image left, details right*

*Tablet (768px): two columns*

*Phone (375px): single column*

## 3. Layout Techniques

| Area | Technique | Detail |
|---|---|---|
| Header | Flexbox | d-flex justify-content-between align-items-center puts the logo left and the cart icon right |
| Navbar | Bootstrap navbar | navbar-nav with flex-wrap justify-content-center; font size and padding adjusted at 768px with a media query in style.css |
| Product grid | Bootstrap grid (flex) | row-cols-2 / md-3 / lg-4 with gutters g-3 and g-md-4; cards use h-100 for equal height |
| Product images | CSS aspect-ratio | aspect-ratio: 4 / 5 with object-fit: cover keeps all cards uniform |
| Product page | Bootstrap grid | col-12 col-md-6 for image and details; img-fluid for scaling |
| Footer | Grid + flex column | Three columns on tablet and up; sticky to the bottom via body d-flex flex-column min-vh-100 and mt-auto |

## 4. Conclusion

Both pages meet the assignment requirements. The layout uses Flexbox and Bootstrap grid throughout, reflows cleanly at phone, tablet and desktop widths, and is consistent between pages through a shared header and footer. Functionality such as the cart and quantity logic is intentionally left for the JavaScript assignment.
