Name: Haseeb Alam

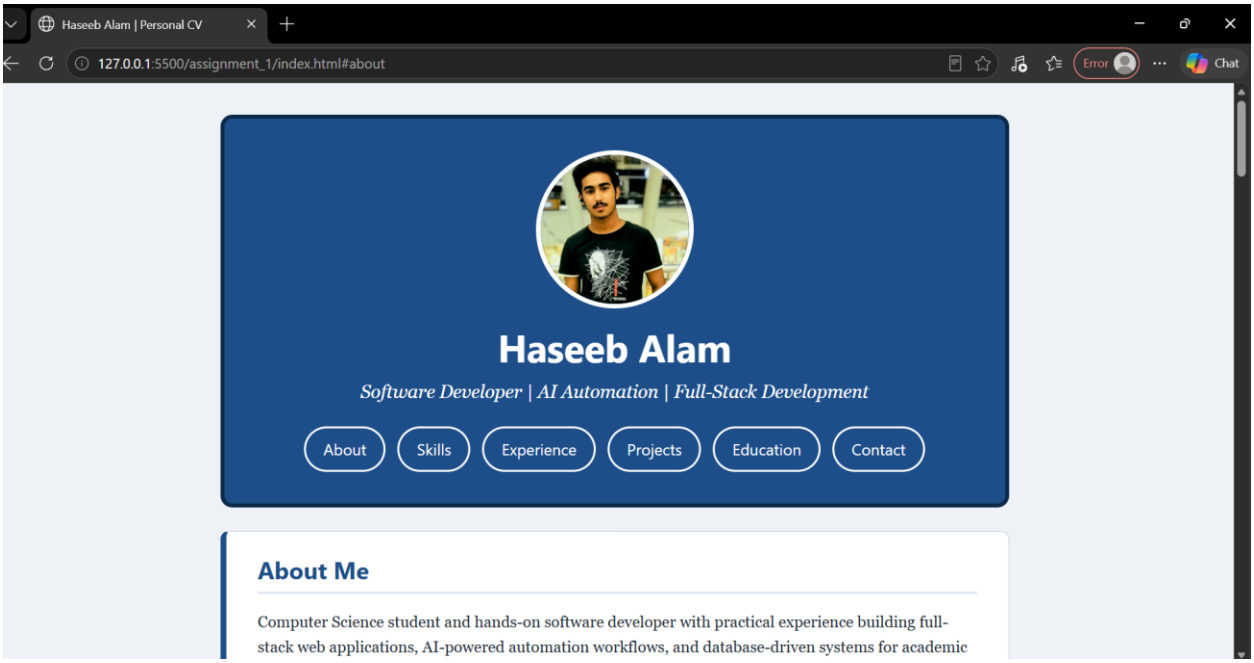

Roll No: SP24-BCS-142(A)

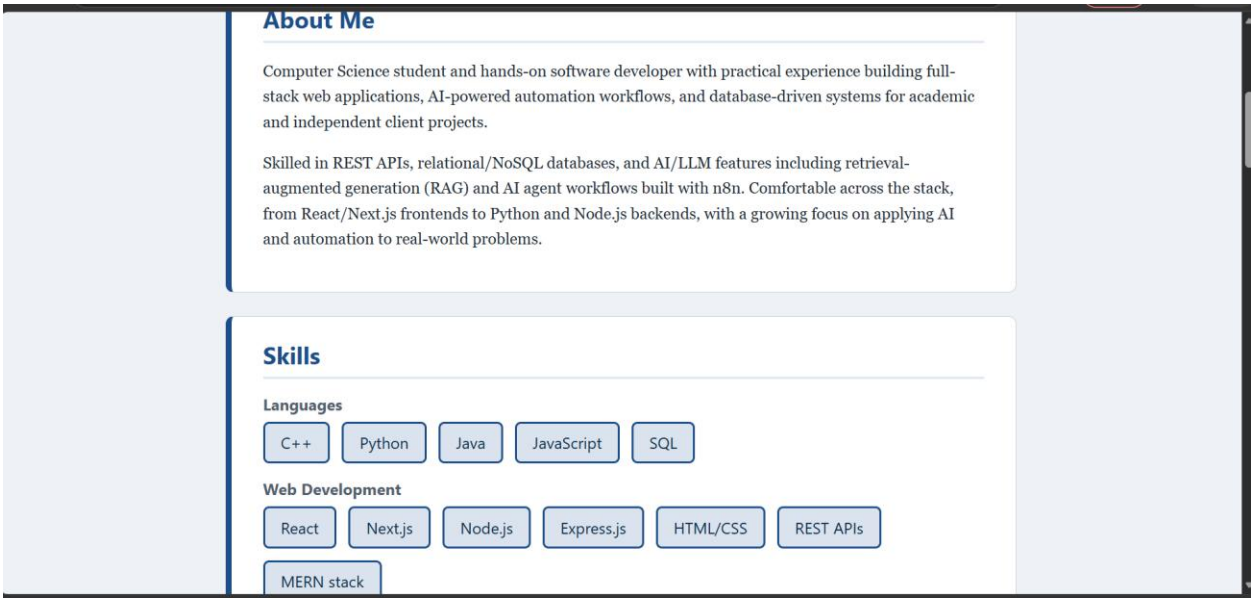

Task: Build a single-page personal CV/résumé as a static HTML + CSS website — no JavaScript, no framework, just semantic HTML5 and hand-written CSS. This is where you prove you actually know the raw building blocks before anything is allowed to hide them from you.

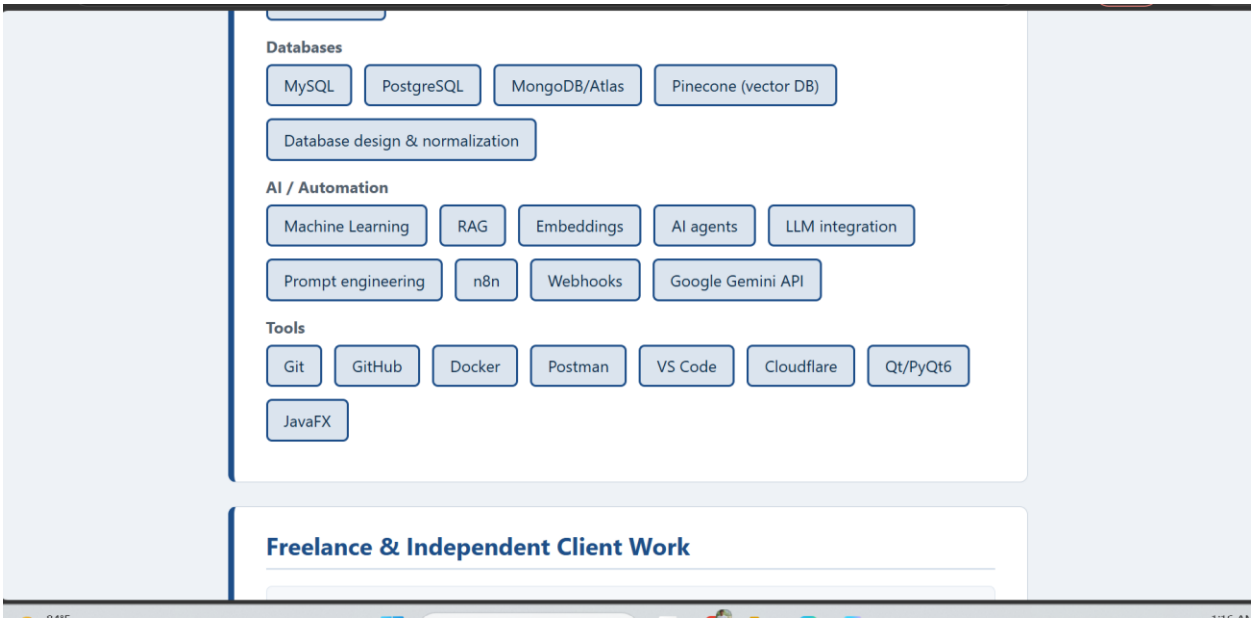

Your page must include, at minimum:

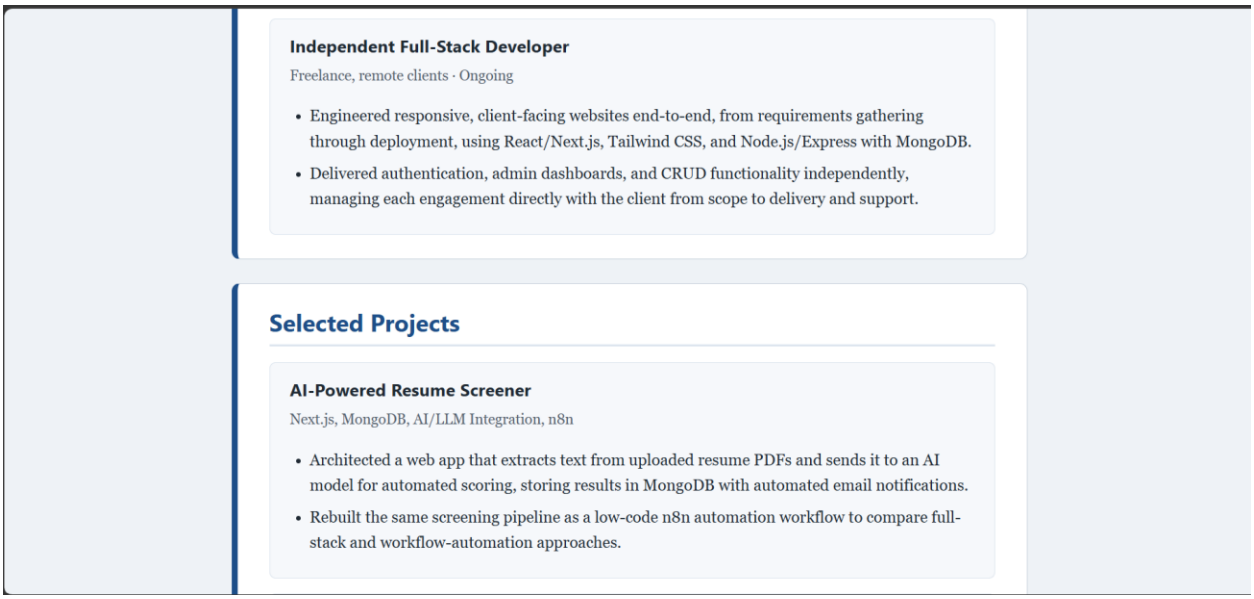

- A header with your name, a short professional tagline, and a photo (a placeholder image is fine).
- An “About Me” section.
- An “Education” section listing your academic history in a semantic list or table.
- A “Skills” section.
- A “Contact” section with a real <a href="mailto:..."> link and at least one social/portfolio link.
- Correct use of semantic HTML5 elements throughout — <header>, <nav>, <main>, <section>, <article>, <footer> as appropriate, not a page built entirely out of unstyled s.
- Styling entirely in a separate styles.css file (external stylesheet, not inline style="" attributes) using the box model correctly — sensible margins, padding, and borders, not everything jammed against everything else.

About Me
Computer Science student and hands-on software developer with practical experience building full-stack web applications, AI-powered automation workflows, and database-driven systems for academic and independent client projects.
Skilled in REST APIs, relational/NoSQL databases, and AI/LLM features including retrieval-augmented generation (RAG) and AI agent workflows built with n8n. Comfortable across the stack, from React/Next.js frontends to Python and Node.js backends, with a growing focus on applying AI and automation to real-world problems.

Freelance & Independent Client Work

Independent Full-Stack Developer
Freelance, remote clients · Ongoing
• Engineered responsive, client-facing websites end-to-end, from requirements gathering through deployment, using React/Next.js, Tailwind CSS, and Node.js/Express with MongoDB.
• Delivered authentication, admin dashboards, and CRUD functionality independently, managing each engagement directly with the client from scope to delivery and support.
Selected Projects
AI-Powered Resume Screener
Next.js, MongoDB, AI/LLM Integration, n8n
• Architected a web app that extracts text from uploaded resume PDFs and sends it to an AI model for automated scoring, storing results in MongoDB with automated email notifications.
• Rebuilt the same screening pipeline as a low-code n8n automation workflow to compare full-stack and workflow-automation approaches.

AI Agent Automation & Knowledge Base (RAG) Pipeline

n8n, Google Gemini API, Vector Database, Docker

- Designed multi-step AI agent workflows integrating webhooks and LLM (Gemini) calls to automate document processing, using Docker and Cloudflare Tunnel to expose local endpoints.
- Built a knowledge-base ingestion pipeline that chunks documents and stores embeddings in a vector database, applying RAG to ground AI responses in stored content.

E-Commerce Full-Stack Web Application

Next.js, React, Node.js, MongoDB, Cloudinary

- Developed a storefront with cart and cash-on-delivery order handling plus a separate admin dashboard for product/order management, using Cloudinary for media and MongoDB Atlas for persistence.

WhatsApp AI Automation

n8n, Evolution API, Baileys, Docker

- Connected WhatsApp messaging to n8n via Evolution API/Baileys, orchestrating webhook-driven flows that route messages through AI processing for automated responses.

WhatsApp AI Automation

n8n, Evolution API, Baileys, Docker

- Connected WhatsApp messaging to n8n via Evolution API/Baileys, orchestrating webhook-driven flows that route messages through AI processing for automated responses.

Hostel Management System

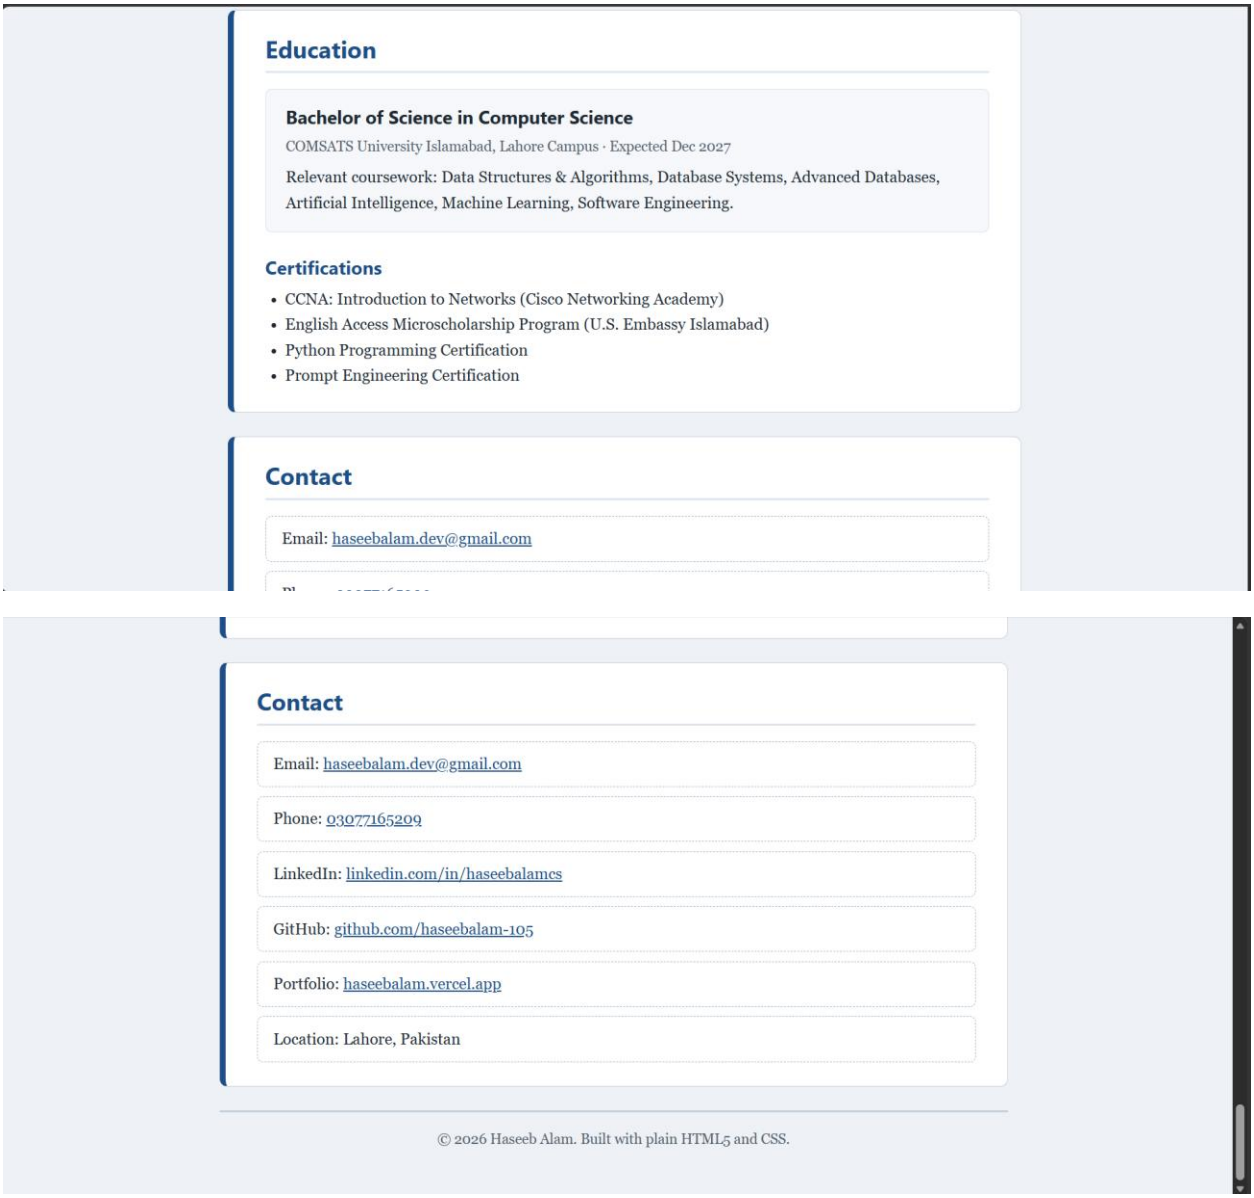

SQL, Python, Database Design

- Designed a normalized relational database with role-based access to manage student records, room allocation, billing, and complaints, implementing full CRUD operations.

Advanced To-Do / Task Management System

C++, Qt, Data Structures & Algorithms

- Built a desktop task manager applying core DSA (stack-based undo, task dependencies, search/filter/sort) plus recurring tasks, Pomodoro timer, and streak tracking with persistent storage.
